Meghna Central Warehouse: Safety Manual

Synthetic retrieval-test document. Meghna Cooperative and all figures in it are fictional.

Manual revision DOC-WHS-2027-05. This manual applies to everyone who enters the Meghna central warehouse at Tongi, including staff, drivers, contractors and visitors.

Contents: page 1 overview, page 2 protective equipment, page 3 forklifts, page 4 chemical storage, page 5 fire safety, page 6 incident reporting.

Personal protective equipment

Safety shoes with steel toe caps and a high-visibility vest must be worn at all times on the warehouse floor. Hard hats are required in the racking aisles, where pallets are stored up to 9 metres high.

Visitors receive a vest and a hard hat at the gate and must be escorted by a warehouse employee. Damaged equipment is replaced free of charge at the store room; employees should not buy their own.

Forklift operation

Only employees holding a valid Meghna forklift licence, code FL-2, may drive a forklift. The licence is valid for 2 years and is renewed after a refresher course and a practical test.

The speed limit inside the warehouse is 8 km/h, and 5 km/h near loading bays and pedestrian crossings. Never lift a load heavier than the 2,500 kg rated capacity shown on the mast plate. Pedestrians must keep at least 3 metres away from a moving forklift.

Chemical storage

Fertilisers and pesticides are stored only in Zone C, which is locked and ventilated. Each container must carry its original label and a safety data sheet kept in the Zone C cabinet.

Liquids are stored on the lowest shelf, never above 1.5 metres. A spill kit is kept at the Zone C door. Spills larger than 5 litres must be reported to the shift supervisor immediately, and the area must be cleared before clean-up.

Fire safety

Fire extinguishers are placed every 20 metres along the main aisles and are inspected every month. Smoking is allowed only in the marked area outside Gate 2.

When the fire alarm sounds, stop work, switch off forklifts and walk to the assembly point in the north parking lot. Fire drills are held every 3 months, and the whole building must be cleared within 4 minutes.

Incident reporting

Every injury, near miss or damage to stock must be reported on form SAF-IR before the end of the shift, even when nobody is hurt. Serious injuries are reported to the safety officer by phone at once, on extension 4040.

The safety officer investigates every report within 48 hours and shares the lessons learned at the monthly safety meeting. Reporting an incident never leads to disciplinary action against the person who reports it.
